

# HIRO

enduro and motocross  
motorcycle engines

The name HIRO is synonymous with excellence measured in quality, reliability, performance and integrity.

The new HIRO 125 is the engine you have been waiting for. It does all that the other engines of the same capacity on the market do, plus something more. Because it is built by a sportsman with the sportsman's needs and aspirations in mind.

Don't look for anything cheap in it, not even the price; excellence can not be cheap and only the best is good enough for the HIRO irrespective of cost. The HIRO 125 is sturdy, oversized, dependable, very powerful and made to last. The harder you drive it, the more you will come to like its exceptional performance both at low and high revs through a continuous display of power.

The HIRO is easy to take apart and reassemble; spare parts are always available and it is our policy to sell them at the lowest possible price, so that maintenance will not become a financial problem.

A basic supply of spare parts is sold on request with the engine; you will not have to wait for the dealer to send them out to you. No risk of losing your chance to win.

We supply the exhaust system on request or you can have the blue-print free of charge.

Become the proud owner of a HIRO 125 and start winning.
